

WELLBEINGFEM RESOURCE 01

Living in Frequency

An Introduction to Frequency, Rhythm & Everyday Wellbeing

Frequency is woven through daily life — in sound, light, rhythm, breath, nature and the subtle patterns that shape how we feel. This first WellBeingFem resource offers a grounded introduction to frequency awareness, along with reflective practices to help you notice what brings you back into balance.

Inside this resource

- What do we mean by frequency?
- We live within rhythms
- Frequency as science and frequency as experience
- Fractals, frequency & wellbeing
- From fractals to frequency with Healy
- Cultivate frequency & support coherence with breathwork
- Continue your practice & explore Healy sessions

What Do We Mean by Frequency?

At its simplest, frequency describes how often something repeats over time. We encounter frequency every day in sound waves, light, heartbeat, breathing rhythms, sleep cycles and the changing patterns of nature.

Frequency awareness does not ask us to make life abstract. It helps us notice rhythm, pace, repetition and resonance — the patterns that shape how our body, mind and environment interact.

Everyday examples

- 🌿 sound and music
- 🌿 breath and heartbeat
- 🌿 sleep and wake rhythms
- 🌿 movement and rest
- 🌿 light and daily cycles
- 🌿 seasonal patterns

We Live Within Rhythms

Daily life is shaped by rhythms both around us and within us. Day and night, the seasons, the pace of work and rest, the menstrual cycle, breath, movement, and emotional tempo all influence wellbeing.

When we begin to notice these rhythms, support can become better timed, more compassionate and more realistic.

Frequency as Science and Frequency as Experience

Some forms of frequency are physically measurable, such as sound, light and electrical rhythms in the body. We may also use words like resonance, harmony and coherence more reflectively — to describe whether a place, practice or relationship feels settling, nourishing or draining.

Both ways of speaking can be meaningful when we distinguish them clearly. Scientific language helps us stay grounded. Reflective language helps us notice lived experience.

Scientifically measurable

- 🌿 sound
- 🌿 light
- 🌿 biological rhythms

Reflectively noticed

- 🌿 resonance
- 🌿 harmony
- 🌿 intuition

Frequency, Resonance & Coherence

If nature is organised through rhythm, pattern and frequency, how might we support greater coherence within our own lives? Breathwork, time in nature, meditation and journaling can all help us become more aware of our rhythms and create conditions that support balance and coherence.

At WellBeingFem, Healy resonance analysis adds a personalised frequency dimension to this practice. Its databases include modules such as Australian Bush Flowers, Bioenergetic Harmony and Pain/Psyche, highlighting the frequency programmes showing the strongest resonance with your individual field at that time. Remote sessions use your individual profile, with intention and focused connection forming part of the WellBeingFem approach to remote frequency work.

Fractals, Frequency & Wellbeing

Fractals are patterns that repeat in similar ways at different scales. A tree offers a simple example: the trunk divides into branches, the branches divide again, and finer branches become twigs. Each part is different, yet the same underlying pattern can still be recognised. In this way, the whole is echoed within the part.

Nature is full of this quiet repetition. We see it in trees, rivers, clouds, coastlines, shells and water. Similar branching and complex patterns also appear within us — in the lungs, blood vessels and neural structures of the body.

*"Each part is like the whole
except it is smaller."*

— Benoit Mandelbrot

Why are we drawn to these patterns?

Research at the University of Oregon suggests that the human visual system may be especially responsive to the kinds of repeating patterns found throughout the natural world. We may therefore respond to a tree, a flowing river or a cloud-filled sky long before we consciously think about why it feels pleasing.

Research by Marc Berman and colleagues also suggests that time in nature — and even viewing natural images — can support directed attention. This offers an interesting foundation for the intentional use of nature imagery within meditation.

*Nature speaks in patterns
as well as rhythms.*

Berman, Jonides & Kaplan (2008)

From Fractals to Frequency

Nature does not only repeat itself through shape. It also moves through rhythm. The breath rises and falls. The heart continually adjusts. Day moves into night. The seasons turn.

Frequency gives us another way of noticing these rhythms. A living body is not a machine operating at one fixed frequency. It is made up of many interacting rhythms, continually responding to movement, breathing, emotion, rest and the world around us.

Some of these influences may support greater coherence and balance, while others may leave us feeling depleted or out of rhythm. By becoming more aware of them, we are better able to participate consciously in the conditions that shape our wellbeing. At WellBeingFem, our mission is to support women in cultivating this awareness, giving them deeper insight into their wellbeing and their personal frequency landscape.

Heart Rhythm, HRV and Coherence

The heart is a powerful example of frequency in action. It does not beat at a fixed rate. Instead, it continually adjusts, speeding up and slowing down in response to what is happening within and around us. This natural variation is called heart rate variability (HRV).

Research shows that a more flexible and coherent heart rhythm is associated with greater resilience, emotional balance and wellbeing. Practices such as coherent breathing, time in nature, mindful awareness and supportive frequencies can all help to cultivate a more coherent heart rhythm.

Cultivate Frequency & Support Coherence with Breathwork

Throughout this resource we have explored frequency as rhythm, pattern and response. The breath gives us one of the simplest ways to work consciously with our own rhythms. By bringing attention to the heart and allowing the breath to become slower and more even, we can create conditions that support greater coherence within the body and our experience.

1

Find a comfortable position

Sit comfortably and allow your body to feel supported. Rest your hands naturally.

2

Bring attention to your heart

Rest your awareness in the centre of your chest. You may place one hand over your heart and one hand over your abdomen.

3

Breathe through the heart space

Begin breathing slowly and gently, imagining that your breath is flowing in and out through the heart space.

4

Find an easy rhythm

Allow the breath to become smooth and unforced. You may like to breathe in for a count of five and out for a count of five, or simply find a rhythm that feels natural. With each exhale, allow unnecessary tension to release.

Continue for two to three minutes, or longer if you wish.

Cultivating the Frequency You Wish to Experience

5

Choose a quality

Bring to mind a quality you would like to experience or cultivate more fully — perhaps peace, compassion, gratitude, love, joy, ease or trust.

6

Give it a word

Choose a word that represents this quality for you.
Repeat it quietly in your mind and notice what it evokes.

7

Breathe & connect

Continue breathing through the heart space while holding the word lightly in your awareness. Notice any memories, images, sensations or feelings associated with this quality. Allow yourself to reconnect with the experience rather than only thinking about it.

8

Return to the body

When you are ready, allow your attention to return fully to your body and surroundings. Notice your breathing, posture and inner state. Has anything shifted in your sense of rhythm, balance or coherence?

Helpful reminders

Breathe gently and
never force the breath.

If your mind wanders,
return to your heart,
your breath and
your chosen word.

There is no right
or wrong way to do
this practice.

Even a few minutes
can make a difference.

A
— final —
thought

Frequency awareness begins with attention.
Through breath and repeated practice, we can become more familiar with the rhythms and qualities that support greater coherence within our lives.

Living in Frequency

Throughout this resource, we have explored frequency not as one fixed state, but as part of the patterns and rhythms woven through everyday life. Research into natural fractals, attention, heart-rate variability and physiological coherence offers different ways of understanding how living systems respond, adapt and organise across time.

The breathwork practice in this resource brings these ideas into daily life. Rather than trying to remain in one emotional state, it invites you to work consciously with breath, attention and a quality you wish to strengthen — perhaps peace, compassion, gratitude, love, joy, ease or trust. Through embodied awareness, you become increasingly familiar with how that quality feels and with the conditions that help it grow.

What we give our attention to becomes more present
in our daily lives.

Frequency awareness therefore becomes less about trying to control how we feel and more about recognising that, alongside the influences we cannot control, we still have the capacity to choose where we place our attention and which qualities we practise and strengthen.

We may not be able to determine every mood, sleep pattern, circumstance or influence around us. But we are not entirely passive within them. Through attention, intention and repeated practice, we can become more familiar with the qualities that support us and more able to return to them.

Around us are patterns.

Within us are rhythms.

Within our attention lies the possibility of
cultivating what we wish to bring more fully
into our lives.
